MENTOR MEETING REPORT

Date: Nov 6, 2020

Summary:

Feedback Summary	Actions Taken / Planned
Alina asked about where we are planning on storing temporal versus permanent data. The EventModel seemed pretty bloated currently.	We are not storing user data and have since implemented a session model that takes care of temporarily storing data for preferences. We do plan on eventually storing historical group data, but not for this phase.
Alina asked how we came to the decision to use a swipe versus ranked list version.	We decided to go with the swipe version since the tradeoff is a more interesting user experience versus a better final recommendation. We wanted to create an interesting user experience and have a pretty good recommendation model over a worse user experience and a better recommendation model.
